# Pimelea sericeovillosa subsp. alta

## **COMMON NAME**

pimelea

#### **SYNONYMS**

None first described in 2011

#### **FAMILY**

Thymelaeaceae

#### **AUTHORITY**

Pimelea sericeovillosa subsp. alta C.J.Burrows

## **FLORA CATEGORY**

Vascular - Native

## **ENDEMIC TAXON**

Yes

## **ENDEMIC GENUS**

No

# **ENDEMIC FAMILY**

No

## STRUCTURAL CLASS

Trees & Shrubs - Dicotyledons

## **CURRENT CONSERVATION STATUS**

2017 | At Risk - Naturally Uncommon | Qualifiers: DP, RR, Sp

## **PREVIOUS CONSERVATION STATUSES**

2012 | At Risk - Naturally Uncommon | Qualifiers: RR, Sp

2009 | At Risk - Naturally Uncommon | Qualifiers: DP, RR

2004 | At Risk – Naturally Uncommon

## **BRIEF DESCRIPTION**

Low growing sprawling shrub with hairy twigs bearing pairs of hairy pointed leaves, hairy white flowers inhabiting the Pisa Range and possibly nearby. Leaf dimensions unknown, hairs denser on underside. Fruit unknown.

## **DISTRIBUTION**

Endemic. New Zealand: South Island, Pisa Range

## **HABITAT**

Subalpine to alpine. Usually in open fell-field on mountain tops, ridge crests and in open stonefields. occasionally found at lower levels in short short-tussock grassland.

#### **DETAILED DESCRIPTION**

A low, much-branched, dull-green loose cushion-forming shrublet to  $50 \times 250$  mm. with brown, clustered, appressed, leafy, densely villous young branchlets, and with older, gnarled, leafless stems often visible (these often leafless and glabrous, dark brown to black, often partly buried by windblown silt or sand). Internode length 0.3-0.6 mm. Branching mainly sympodial and radiating from a stout main stem up to 15 mm in diameter. Node buttresses lunate, dark brown, masked by hairs on young stems, not prominent on leafless branchlets. Leaves decussate, ascending, imbricate, sessile or with very short petioles (0.2 mm). Lamina medium to pale green, elliptic to oblong,  $2.2-4.0 \times 1.0-1.3$  mm, adaxially concave, mid-vein not evident, abaxial surface very densely covered with straight, grey-white, moderately long hairs; adaxial surface sparsely hairy, sometimes glabrous, obtuse, base cuneate, stomata on both adaxial and abaxial surfaces. Inflorescences terminal, with 1 or 2, sometimes 3, flowers. Involucral bracts 4, the same size as, or slightly wider than adjacent leaves ( $2.3 \times 1.5$  mm). Receptacle usually with abundant long hairs. Plants gynodioecious. Flowers 1-2-3 per inflorescence, white, on very short (0.1 mm) pedicels, very hairy outside, inside hairless. Female tube 2.5 mm long, ovary portion 2 mm, calyx lobes 1.0-1.2  $\times$  0.5 mm; hermaphrodite tube 3-4 mm long, ovary portion 2 mm, calyx lobes 1.5  $\times$  0.8-1.0 mm. Anther dehiscence introrse. Ovary with dense short hairs on summit, less dense to half way down. Fruits not seen.

#### **SIMILAR TAXA**

Resembling subsp. sericeovillosa from which it differs by its allopatric distribution, more open (loose) cushion forming growth habit, dull-green colour, and leave investiture comprised solely of long straight hairs

## **FLOWERING**

October - January

#### **FLOWER COLOURS**

White

#### **FRUITING**

Unknown

## **PROPAGATION TECHNIQUE**

Easily grown from semi-hardwood cuttings but difficult to maintain in cultivation. Prefers a moist free-draining soil, planted in full sun. Dislikes humidity, shade and poor drainage.

#### THREATS

See comments about the "Conservation Status" opinions and their validity as offered by Burrows (2011) under the Fact Sheet for Pimelea sericeovillosa subsp. sericeovillosa. As Pimelea (d) (CHR 472016; Pisa) Pimelea sericeovillosa subsp. alta was listed by de Lange et al. (2009; p. 91) as Taxonomically Indeterminate/Naturally Uncommon. This assessment may still be appropriate as it was based on critical field data obtained by Department of Conservation Staff surveying the Pisa Range. However, due to the recircumscription of P. sericeovillosa by Burrows (2011) and comments regarding possible introgression between subsp. alta and P. aridulla and P. oreophila (comments which seem to be solely based on limited observations), this assessment may need to change.

#### **ETYMOLOGY**

**pimelea**: Pimeleoides means "resembling Pimelea", a genus in the family Thymelaeaceae (Greek, -oides = resembling, like).

# **TAXONOMIC NOTES**

Pimelea sericeovillosa subsp. alta was listed by de Lange et al. (2009; p. 91) as Taxonomically Indeterminate/Naturally Uncommon as Pimelea (d) (CHR 472016; Pisa).
