

Byssoloma subundulatum

BIOSTATUS

Native

CURRENT CONSERVATION STATUS

2018 | Not Threatened | Qualifiers: SO

CATEGORY

Lichen

STRUCTURAL CLASS

Lichens - Crustose

LICHEN SUBSTRATE

Foliicolous (leaves)

SUBSTRATE DETAILS

Foliicolous

GENUS

Byssoloma

FAMILY

Pilocarpaceae

AUTHORITY

Byssoloma subundulatum (Stirt.) Vězda

SYNONYMS

Lecanora subundulata Stirt., Bacidia subundulata (Stirt.) R.Sant.

TAXONOMIC NOTES

Santesson (1952: p 454) did not locate any original material of Stirton's *Lecanora subundulata* (none either in E or BM) and instead selected a neotype from material collected by H.H. Allan from leaves on *Lastreopsis hispida* on Colonial Knob near Wellington. A recent discovery of original Buchanan material in the herbarium of Otago University (OTA), duplicates of which were sent to James Stirton, allows the Buchanan material (now in WELT) to serve as lectotype.

ENDEMIC TAXON

No

ENDEMIC GENUS

No

ENDEMIC FAMILY

No
