Calystegia tuguriorum

COMMON NAME climbing convolvulus, NZ bindweed

SYNONYMS Convolvulus tuguriorum G.Forst.

FAMILY Convolvulaceae

AUTHORITY Calystegia tuguriorum (G.Forst.) Hook.f.

FLORA CATEGORY Vascular – Native

ENDEMIC TAXON No

ENDEMIC GENUS No

ENDEMIC FAMILY

STRUCTURAL CLASS Lianes & Related Trailing Plants - Dicotyledons

NVS CODE CALTUG

CHROMOSOME NUMBER 2n = 22

CURRENT CONSERVATION STATUS 2017 | Not Threatened | Qualifiers: SO

PREVIOUS CONSERVATION STATUSES

2012 | Not Threatened 2009 | Not Threatened 2004 | Not Threatened

DISTRIBUTION

Indigenous. North, South, Stewart and Chatham Islands. Present in Chile and on the Juan Fernandez islands

HABITAT

Coastal to lowland. Usually in shrubland and along forest margins. occasional found on the margins of wetlands. It often favours grey scrub and bare lava or open rock strewn ground.

WETLAND PLANT INDICATOR STATUS RATING

FACU: Facultative Upland Occasionally is a hydrophyte but usually occurs in uplands (non-wetlands).

DETAILED DESCRIPTION

Perennial vine or scrambling plant producing numerous, slender, much-branched puberulent twinning stems. Often forming dense patches. Petioles up to 40 mm, slender. Leaves $(10-)40(-50) \times (15-)30(-40)$ mm broad-ovate to deltoid or reniform, entire or sinuate; base cordate, sinus shallow and broad; apex acute to acuminate. Peduncules terete to slightly winged, (30-)110 mm long, > leaves. Bracts broadly ovate to suborbicular; base cordate, apex apiculate. Sepals similar to and < or = bracts. Corolla (25-)50 x (30-)60 mm diam., funnelform, white. Capsule 8-12 mm, broad-ovoid. Seeds orange, smooth.

SIMILAR TAXA

Could be confused with the only other consistently white-flowered Calystegia in New Zealand, <u>C. marginata</u>, which differs by its sagittate, fish-tailed leaves, shorter conspicuously winged peduncles, smaller flowers and black seeds which are ribbed and finely covered in protuberances. C. tuguriorum hybridises freely with <u>C. soldanella</u>.

FLOWERING September - March

FLOWER COLOURS White

FRUITING Present throughout the year.

LIFE CYCLE

Capsules are water and possibly also wind dispersed (Thorsen et al., 2009).

PROPAGATION TECHNIQUE

Easy from seed and rooted pieces. Once established can be rather invasive and difficult to eradicate! Excellent growing through a hedge where the large white flowers can be seen to full effect and the creeping stems are more easily contained.

ETYMOLOGY

calystegia: Name is derived from the Greek words kalyx 'cup', and stege 'a covering', meaning 'a covered cup', the calyx of some bindweeds being enclosed in two bracts. **tuguriorum**: Growing around huts

TAXONOMIC NOTES

Putative wild hybrids between this species and C. soldanella are common. Some collections suggest that it may also hybridise with C. sepium subsp. roseata.
