Coprosma robusta

**COMMON NAME**
karamū, glossy karamū

**SYNONYMS**
?Coprosma coffaeoides Colenso

**FAMILY**
Rubiaceae

**AUTHORITY**
Coprosma robusta Raoul

**FLORA CATEGORY**
Vascular – Native

**ENDEMIC TAXON**
Yes

**ENDEMIC GENUS**
No

**ENDEMIC FAMILY**
No

**STRUCTURAL CLASS**
Trees & Shrubs - Dicotyledons

**NVS CODE**
COPROB

**CHROMOSOME NUMBER**
2n = 44

**CURRENT CONSERVATION STATUS**
2012 | Not Threatened

**PREVIOUS CONSERVATION STATUSES**
2009 | Not Threatened
2004 | Not Threatened

**BRIEF DESCRIPTION**
Large bushy shrub with pairs of glossy leaves which have a small dark-tipped flap on the stem between the leaf bases. Leaves 7-12cm long, with a prominent ridge up the middle underneath and a furrow up the middle above. Fruit red, in tight clusters along twigs.

**DISTRIBUTION**
Endemic. North and South Islands. Naturalised on the Chatham Islands within a small area between Waitangi and Owenga.

**HABITAT**
Common throughout coastal, lowland and lower montane habitats within shrublands and open sites within forest.
FEATURES
Shrub or small tree up to 6 m tall. Branches numerous, stout, erect to somewhat spreading. Petioles stout, 10-20 mm long. Stipules fused towards base, obtuse, glabrous with one of two prominent, black, glandular denticles. Leaves 70-120 x 30-40-50 mm, leathery, dark green above, paler green beneath, glabrous, elliptic, elliptic-oblong to broad-ovate, acute or obtuse, apex mucronate. Venation reticulated, conspicuous. Male flowers in axillary many-flowered glomerules, corolla conspicuous, lobes triangular, acute, stamens 4-5, prominent. Females in compound clusters on peduncles 10-15 mm. Calyx and corolla much reduced, stigmas prominent. Drupe dark orange (rarely yellow), 8-8 x 4-5 mm, oblong to narrow-ovoid.

SIMILAR TAXA
Easily distinguished from all the other lowland, large-leaved Coprosma spp., by the seemingly entire leaves, which are finely toothed along the margins - this can be felt by dragging a finger tips along the leaf edge. Perhaps closest to Coprosma macrocarpa subsp. minor, with which it freely hybridizes, and from which the more simple leaf venation (not so reticulate), finely toothed leaf margins are useful distinctions.

FLOWERING
(July-) August-September (-November)

FLOWER COLOURS
Green, White

FRUITING
(March-) April-May (-July)

PROPAGATION TECHNIQUE
Very easy from fresh seed. Also easy from semi-hardwood cuttings. Fast growing and inclined to become weedy.

ETYMOLOGY
coprosma: From the Greek kopros 'dung' and osme 'smell', referring to the foul smell of the species, literally 'dung smell'
robusta: Sturdy

WHERE TO BUY
Not commonly cultivated but often naturalising from urban indigenous vegetation remnants. Fruit bird dispersed. Heavily fruiting females (which are often apomictic) can be very spectacular.
