# Eleocharis acuta

# **COMMON NAME**

sharp spike sedge

#### **SYNONYMS**

Eleocharis acuta R.Br. var. platylepis Hook.f.; Eleocharis acuta R.Br. var. tenuis Carse

#### **FAMILY**

Cyperaceae

## **AUTHORITY**

Eleocharis acuta R.Br.

## **FLORA CATEGORY**

Vascular - Native

#### **ENDEMIC TAXON**

No

## **ENDEMIC GENUS**

No

### **ENDEMIC FAMILY**

No

## STRUCTURAL CLASS

Sedges

## **NVS CODE**

**ELEACU** 

## **CHROMOSOME NUMBER**

2n = 20

## **CURRENT CONSERVATION STATUS**

2017 | Not Threatened | Qualifiers: SO

# **PREVIOUS CONSERVATION STATUSES**

2012 | Not Threatened

2009 | Not Threatened

2004 | Not Threatened

## **DISTRIBUTION**

Indigenous. In New Zealand found on the Kermadec Islands, North Island, South Island, Stewart Island/Rakiura and Chatham Islands. Also in Australia and on Norfolk Island.

# **HABITAT**

Coastal to montane. Common in open to partially shaded permanently damp ground. Usually in swamps, and on stream, river, pond, and lake margins. Sometimes present in seepages within pasture.

# **WETLAND PLANT INDICATOR STATUS RATING**

**OBL: Obligate Wetland** 

Almost always is a hydrophyte, rarely in uplands (non-wetlands).

#### **DETAILED DESCRIPTION**

Terrestrial or semi-aquatic sedge forming yellow-green to green somewhat distinct, crowded tufts. **Rhizomes** lignaceous, widely creeping, 1–2 mm diameter. **Culms** more or less crowded in distant tufts,  $15-900 \times 0.5-2.5$  mm, more or less erect, terete, distinctly striated; lower sheath dark red to maroon with an oblique orifice, upper sheath paler, closely appressed to culm, orifice usually truncate or rarely slightly oblique, with dark thickened edge and distinct mucro at back. **Spikelet**  $5-25 \times 2-5$  mm, cylindrical, acute at apex. **Glumes** numerous, basal 2 sterile, shorter, broader and paler than rest, upper glumes ovate-lanceolate with hyaline apices. **Hypogynous bristles** 6–8,  $\ge$  nut. **Stamens** 3. **Style** 3-fid. **Nut**  $1.5 \times 1.0$  mm, obovoid, biconvex or plano-convex, pale brown, smooth or faintly reticulate; the small persistent style-base triangular, compressed, white or very pale brown.

#### **SIMILAR TAXA**

Distinguished from the somewhat similar <u>Eleocharis pusilla R.Br.</u> and <u>E. gracilis R.Br.</u> by the much larger size, and by the usually truncate (only rarely slightly oblique), distinctly mucronate uppermost leaf-sheath which has a thickened orifice. In the other two species the uppermost leaf-sheath has a consistently oblique orifice and is without a mucro.

#### **FLOWERING**

September-January

#### **FRUITING**

October-May

# LIFE CYCLE

Bristly nuts are dispersed by water and possibly wind and attachment (Thorsen et al., 2009).

#### **PROPAGATION TECHNIQUE**

Easy from fresh seed and the division of whole plants. Does best partially submerged but will also grow in damp soil. Needs full sun to flower.

#### **ETYMOLOGY**

eleocharis: Charm of the swamp

acuta: From the Latin acutatus 'sharp', refers to something sharpened or with an acute angle

## WHERE TO BUY

Occasionally sold by specialist native plant nurseries.

#### **ATTRIBUTION**

Description adapted from Moore and Edgar (1970)
