

# Juncus subnodulosus

## BIOSTATUS

Exotic

## CONSERVATION STATUS

Not applicable

## CATEGORY

Vascular

## STRUCTURAL CLASS

Rushes & Allied Plants

## GENUS

Juncus

## FAMILY

Juncaceae

## AUTHORITY

Juncus subnodulosus Schrank

## SYNONYMS

Verojuncus subnodulosus (Schrank) Závěská Drábková & Pročkůw

## TAXONOMIC NOTES

Pročkůw et al. (2023) proposed a taxonomic segregation of *Juncus* into six genera based on molecular and morphological evidence. Whilst it has long been recognised that the current circumscription of *Juncus* includes morphologically divergent taxa—reflected in the recognition of numerous subgenera and sections—the consensus view of the NZPCN website taxonomy subcommittee, taking into consideration advice from Australian *Juncus* expert Dr Karen Wilson (NSW Herbarium) and others in Europe is that the generic segregations proposed need further consideration and testing. Accordingly, it has been decided to maintain the current broad circumscription of *Juncus*, but to include all new names as synonyms in factsheets. We thank, in particular, Dr Wilson for her helpful comments.

## ENDEMIC GENUS

No

## ENDEMIC FAMILY

No

## YEAR NATURALISED

1868

## ORIGIN

Europe, N. Africa, N. America

## WETLAND PLANT INDICATOR STATUS RATING

FACW: Facultative Wetland

Usually is a hydrophyte but occasionally found in uplands (non-wetlands).

## ETYMOLOGY

**juncus**: From the Latin *jungere* 'to tie or bind', the stems of some species being used to make cord (Johnson and Smith)

Wet dune-slack, Koitiata, Turakina.
