

# Juncus tenuis subsp. dichotomus

## SYNONYMS

*Juncus dichotomus* Elliot, *Juncus platyphyllus* (Wiegand) Fernald, *Agathryon tenue* subsp. *dichotomum* (Elliott) Závieská Drábková & Pročków

## FAMILY

Juncaceae

## AUTHORITY

*Juncus tenuis* subsp. *dichotomus* (Elliott) F.Verloove et J.Lambinon

## FLORA CATEGORY

Vascular – Exotic

## STRUCTURAL CLASS

Rushes & Allied Plants

## CONSERVATION STATUS

Not applicable

## WETLAND PLANT INDICATOR STATUS RATING

FACW: Facultative Wetland

Usually is a hydrophyte but occasionally found in uplands (non-wetlands).

## YEAR NATURALISED

1958

## ORIGIN

N. and S. America

## ETYMOLOGY

**juncus:** From the Latin *jungere* 'to tie or bind', the stems of some species being used to make cord (Johnson and Smith)

## TAXONOMIC NOTES

Pročków et al. (2023) proposed a taxonomic segregation of *Juncus* into six genera based on molecular and morphological evidence. Whilst it has long been recognised that the current circumscription of *Juncus* includes morphologically divergent taxa—reflected in the recognition of numerous subgenera and sections—the consensus view of the NZPCN website taxonomy subcommittee, taking into consideration advice from Australian *Juncus* expert Dr Karen Wilson (NSW Herbarium) and others in Europe is that the generic segregations proposed need further consideration and testing. Accordingly, it has been decided to maintain the current broad circumscription of *Juncus*, but to include all new names as synonyms in factsheets. We thank, in particular, Dr Wilson for her helpful comments.
