STRUCTURAL CLASS

Grasses

SIMILAR TAXA

Lachnagrostis billardierei subsp. *tenuiseta* is a common eastern Australian coastal grass that has been recognised from New Zealand based on three gatherings examined from only one New Zealand Herbarium (Austin 2012). Therefore this subspecies is potentially more widespread as it is very easily confused with *L. billardierei* subsp. *billardierei*.

DISTRIBUTION

Indigenous. New Zealand: North Island (Northland and Auckland).

HABITAT

In New Zealand this grass has been gathered from coastal cliff faces and sandy beaches and associated dune systems. However, as it is only recently recognised for New Zealand (Brown 2012) its exact habitat preferences remain to be ascertained.

THREATS

Lachnagrostis billardierei subsp. *tenuiseta* is listed as "Data Deficient" qualified SO [Secure Overseas] and threats to it in New Zealand are poorly understood.

GENUS

Lachnagrostis

FAMILY

Poaceae

AUTHORITY

ENDEMIC FAMILY

No

ETYMOLOGY

lachnagrostis: From “lachne” (wool) referring to the distinctive callus hairs of this genus and “agrostis” by which Trinius (1820) actually meant “a grass” (not an Agrostis). So the generic name means “a hairy (woolly) grass” not “a hairy (woolly) Agrostis” as is often incorrectly stated (see Gardner 2014).

billardierei: Named after Jacques Houttou de Labillardiere (1755-1834), 19th century French botanist who described several New Zealand plants
