# Ourisia glandulosa

COMMON NAME mountain foxglove

SYNONYMS None

FAMILY Plantaginaceae

**AUTHORITY** Ourisia glandulosa Hook.f.

FLORA CATEGORY Vascular – Native

ENDEMIC TAXON Yes

ENDEMIC GENUS No

ENDEMIC FAMILY No

STRUCTURAL CLASS Herbs - Dicotyledons other than Composites

NVS CODE OURGLA

CHROMOSOME NUMBER 2n = 48

CURRENT CONSERVATION STATUS 2017 | Not Threatened

**PREVIOUS CONSERVATION STATUSES** 

2012 | Not Threatened 2009 | Not Threatened 2004 | Not Threatened

## HABITAT

Alpine (1,050-2,000 m a.s.l.) in damp, south-facing, shaded sites within tussock-land, herbfields, and scrub. Usually amongst rocks, in crevices or stonefields.

#### **DETAILED DESCRIPTION**

Perennial herb 5-135 mm tall, with erect inflorescence and repent leaves; stems 1.3-2.8 mm diameter, internodes 1.3-7.1 mm long, clearly separated, glabrous. Leaves opposite, distichous, densely packed along creeping stems; petiole 1.8-5.0 x 1.1-3.8 mm, glabrous or eglandular pilose mostly along margins; lamina 4.7-10.6 x 3.0-8.4 mm, narrowly to broadly obovate, spathulate, apex rounded, base attenuate, margin subentire or with 1-few, irregular notches or regularly crenate, upper surface, punctate, sparsely or densely eglandular pilose near apex, undersides glabrous, punctate. Inflorescence racemose, 1-7-flowered, 48-143 mm long, bracteate, with 1-4 flowering nodes, 2 bracts and 1-2- flowers per node; peduncle 0.8-1.5 mm diameter, pilose or villous, densely glandular/eglandular hairy. Floral bracts up to 6.0-9.1 x 3.6-8.0 mm, sessile or with short, wide petioles, narrowly to broadly obovate, margins subentire or 1-few notched, often emarginate, glandular/eglandular pilose or villous. Flowers 13.5-18.8 x 6.8-15.9 mm; pedicel 5.8-21.9 mm long, pilose to villous, hairs mostly glandular. Calyx 6.2-8.6 x 4.0-8.3 mm, irregular, externally eglandular/glandular pilose, internally mostly glabrous, anterior calyx lobes 5.2-7.1 x 1.5-3.6 mm, posterior calyx lobes 1.3-3.1 x 1.5-3.2 mm, 3 posterior lobes divided 1/4 of calyx length, 2 anterior lobes divided to near base, lanceolate, or narrowly ovate, rarely oblanceolate to narrowly obovate, apex rounded, rarely subacute, prominently 3-veined below. Corolla 14.5-19.0 x 21.1-23.0 mm when flattened, bilabiate, tubularfunnelform, straight or slightly curved, white, externally glabrous; tube 6.1-9.8 x 4.3-5.9 mm at apex, 2.1-3.5 mm wide at base, not constricted near base, mostly yellow inside, sometimes purple outside near base only, glabrous; anterior corolla lobes 7.2-10.3 x 5.1-6.6 at widest point, 2.2-3.1 mm wide at base, posterior corolla lobes 5.0-8.0 x 4.4-7.0 mm wide at widest point, 1.9-3.3 mm wide at base, spreading, obovate or slightly obcordate, apically plane, slightly emarginate or undulate. Stamens 4, didynamous; comprising two long stamens 5.9-10.0 mm long, reaching tube opening, and two short stamens 3.7-8.9 mm long, included; anthers 0.7-1.2 x 0.8-1.1 mm, reniform to horseshoe-shaped; staminode c.0.2-1.7 mm long, inserted c.0.2-0.7 mm above base of corolla, or absent. Style 4.0-6.0 mm long, slightly curved, not exserted; stigma 0.4-0.8 mm diameter, emarginate; ovary 2.9-4.8 x 1.1-2.3 mm, glabrous. Capsules 5.5-6.0 x 4.3-4.6 mm, glabrous, dehiscence loculicidal, rarely septicidal. Seeds 0.6-1.0 x 0.4-0.6 mm.

#### SIMILAR TAXA

Distinguished by the small stature and numerous, short glandular hairs on most parts of the plant except the leaves.

FLOWERING December - March

FLOWER COLOURS White, Yellow

FRUITING January- April

**PROPAGATION TECHNIQUE** Difficult - should not be removed from the wild.

ETYMOLOGY

**ourisia**: After Ouris, governor of the Falkland Islands **glandulosa**: Gland bearing

WHERE TO BUY Not commercially available

**ATTRIBUTION** Description based on Meudt (2006).
