

# Veronica amplexicaulis f. hirta

## COMMON NAME

hebe

## SYNONYMS

*Hebe allanii* Cockayne; *Hebe amplexicaulis* f. *hirta* Garn.-Jones et Molloy

## FAMILY

Plantaginaceae

## AUTHORITY

*Veronica amplexicaulis* f. *hirta* (Garn.-Jones et Molloy) Garn.-Jones

## FLORA CATEGORY

Vascular – Native

## ENDEMIC TAXON

Yes

## ENDEMIC GENUS

No

## ENDEMIC FAMILY

No

## STRUCTURAL CLASS

Trees & Shrubs - Dicotyledons

## CHROMOSOME NUMBER

2n = 40

## CURRENT CONSERVATION STATUS

2017 | At Risk – Naturally Uncommon | Qualifiers: RR, Sp

## PREVIOUS CONSERVATION STATUSES

2012 | At Risk – Naturally Uncommon | Qualifiers: RR, Sp

2009 | At Risk – Naturally Uncommon

2004 | Range Restricted

## BRIEF DESCRIPTION

Low bushy shrub with blue-green oval finely hairy pairs of leaves which clasp the stem at their base and with very short (to 5cm long) spikes of white flowers inhabiting inland south Canterbury. Leaves broad, with reddish margin, 12-21mm long. Leaf bud with no gap at base.

## DISTRIBUTION

Endemic. New Zealand. South Island (south Canterbury - mostly Mt Peel)

## HABITAT

Low montane to subalpine (mostly subalpine). A rupestral of steep-sided rock outcrops – where it grows in joints and crevices, gorges and more rarely boulder falls

In cultivation. Photographer: Jeremy R. Rolfe, Date taken: 15/03/2007, Licence: CC BY.

## DETAILED DESCRIPTION

Small to medium-sized shrubs, branching from the base. Stems trailing to erect, naked except near apex, sparingly branched, uniformly (very rarely bifariously) densely pubescent, 150-600 mm long. Leaves oblong, spreading, glaucous, uniformly pubescent, amplexicaul or abruptly narrowed to broad base, 10-30 × 5-15 mm; apex obtuse, rarely acute; margins red or green. Inflorescence a dense simple spike, peduncle hairy, 20-25 mm. Flowers sessile. Bracts and calyx lobes about equal, 2.0-2.5 mm, ciliate or pubescent all over, broadly ovate, subacute. Corolla white, tube exceeding calyx, lobes narrow. Anthers purple. Capsule ovoid, rounded at apex, narrowly latiseptate, pubescent, very dark brown, about equalling calyx; valves thick walled.

## SIMILAR TAXA

Similar to *Veronica pareora* from which it is distinguished by its usually shorter stems, smaller leaves, pubescent peduncles, and usually non-pedicellate flowers (some plants in the upper Rangitata area have inflorescences whose basal flowers are pedicellate). *Veronica amplexicaulis* f. *amplexicaulis* differs from f. *hirta* by its glabrous leaves and mostly glabrous branchlets

## FLOWERING

October - January (-March)

## FLOWER COLOURS

Violet/Purple, White

## FRUITING

January - December

## PROPAGATION TECHNIQUE

Easily grown from cuttings and fresh seed. Prefers a sunny site and should be planted in a free draining soil. Dislikes humidity.

## THREATS

Not Threatened. A Naturally Uncommon, range restricted and sparsely distributed plant which is widespread but never particularly common within its few known habitats. Some populations may be threatened by browsing animals.

## ETYMOLOGY

**veronica:** Named after Saint Veronica, who gave Jesus her veil to wipe his brow as he carried the cross through Jerusalem, perhaps because the common name of this plant is 'speedwell'. The name Veronica is often believed to derive from the Latin vera 'truth' and iconica 'image', but it is actually derived from the Macedonian name Berenice which means 'bearer of victory'.

**amplexicaulis:** From the Latin amplexus 'clasped' and caulis 'stem' or 'stalk', meaning stem-clasping

## WHERE TO BUY

Not Commercially Available
