CATEGORY

Vascular

STRUCTURAL CLASS

Herbs - Dicotyledons other than Composites

FLOWER COLOURS

Blue, Violet/Purple

DETAILED DESCRIPTION

Radicant herb, stems branching from the base, somewhat fleshy and brittle, the upper 2/3 of the plant forming a many-flowered much branched multiple panicle. Leaves dark green, sessile, rather fleshy, oblong, obovate-spathulate, oblanceolate, lanceolate to linear, margins obscurely dentate to sharply serrate, more or less undulate, up to 40 × 15 mm. Flowers erect on slender pedicels 50-100 mm long, blue-violet, paler outside, sometimes white. Corolla 18-30 mm diameter, 10-15 mm long, subrotate, broad-petalled, tube saucer shaped, 1 × 5 to 1.5 × 6.0 mm, lobes curving up before spreading, broadly oblanceolate, acute, separate at base, touching or overlapping at widest point, 8 × 5 to 14 × 6 mm. Style thickened and blue at top. Calyx lobes glabrous, 2 × 1 to 4.0 × 1.5 mm, triangular, erect or spreading. Capsules glabrous, 5 × 3 to 6 × 4 mm, obconic with protruding valves. Seeds 0.5 mm long.

SIMILAR TAXA

Distinguished from the other radicate New Zealand *Wahlenbergia* Roth by the very large (20-35 mm diameter) pale blue-violet sub-rotate flowers. Aside from the chromosome number this species is indistinguishable from the Australia *W. planiflora* P.J.Sm.

DISTRIBUTION

Endemic. Banks Peninsula

HABITAT

Coastal. Found mainly on steep cliffs where it grows in crevices, and also in associated shrubland, and rough pasture in places free from browsing animals.

THREATS

Accessible plants are at risk from browsing animals. Otherwise this species is abundant within its cliff habitat. It is only listed because it is a narrow range, naturally uncommon endemic.

GENUS

Wahlenbergia

FAMILY

Campanulaceae

AUTHORITY
