

Helichrysum simpsonii subsp. tumidum

SYNONYMS

Helichrysum selago var. *tumidum* Cheeseman

FAMILY

Asteraceae

AUTHORITY

Helichrysum simpsonii subsp. *tumidum* (Cheeseman) de Lange & Blanchon

FLORA CATEGORY

Vascular – Native

ENDEMIC TAXON

Yes

ENDEMIC GENUS

No

ENDEMIC FAMILY

No

STRUCTURAL CLASS

Trees & Shrubs - Dicotyledons

CURRENT CONSERVATION STATUS

2017 | Threatened – Nationally Vulnerable | Qualifiers: Dp, RR

PREVIOUS CONSERVATION STATUSES

2012 | At Risk – Naturally Uncommon | Qualifiers: OL

2009 | At Risk – Naturally Uncommon

2004 | Range Restricted

BRIEF DESCRIPTION

Low growing masses of green and white stems inhabiting coastal cliffs of Otago Peninsula. Stems 3-4mm wide. Leaves scale-like, variable in shape, green, pointed, embedded in whiteish fuzz. Flowers yellowish, in tight cluster at tip of stems.

FLOWER COLOURS

Cream

ETYMOLOGY

helichrysum: From the Greek words helios 'sun' and chrysos 'gold', referring to the colour of the flowers of some species

TAXONOMIC NOTES

The name *Helichrysum intermedium* G.Simpson has been used since 1982 when it was found that the type specimen of *H. selago* (Hook.f.) Benth. & Hook.f. ex Kirk was based on a hybrid. In 2023, the name *H. intermedium* was determined to be illegitimate for the New Zealand taxon, as the name had already been applied to another taxon occurring around the Cape of Good Hope, Africa. *Helichrysum simpsonii* subsp. *tumidum* (Cheeseman) de Lange & Blanchon is provided as a new valid combination for the taxon that was originally described as *Helichrysum selago* var. *tumidum*.
