

Austroblechnum banksii

COMMON NAMES

shore hard fern

BIOSTATUS

Native

CATEGORY

Vascular

STRUCTURAL CLASS

Ferns

FLOWER COLOURS

No flowers

CURRENT CONSERVATION STATUS

2023 | Not Threatened | Qualifiers: SO

[Jump to previous conservation statuses](#)

THREATS

Not Threatened but often patchy in its distribution and quite uncommon north of Auckland.

DETAILED TAXONOMY

FAMILY

Blechnaceae

AUTHORITY

Austroblechnum banksii (Hook.f.) Gasper et V.A.O.Dittrich

SYNONYMS

Blechnum banksii (Hook. f.) Diels; *Spicanta banksii* (Hook.f.) Kuntze; *Lomaria banksii* Hook.f.; *Lomaria blechnoides* Bory in Duperrey, *Blechnum blechnoides* (Bory) Keyserl.

TAXONOMIC NOTES

Perrie et al. (2014) advocated for a broadened circumscription of Blechnaceae whereby a number of genera traditionally recognised as distinct from *Blechnum* were merged within it. However, this view has not met with universal acceptance (see Gasper et al. 2016) and does not seem to be followed worldwide (PPG 2016). From a New Zealand perspective, the decision to merge *Doodia* in *Blechnum*, and rejection of *Diploblechnum* has not been universally accepted either e.g., Wilcox & Warden (2017), and as such it is considered appropriate to follow world opinion and accept the taxonomy of Gasper et al. (2016) and recommendations of the PPG (2016). See also the comments by Pyner (2017).

ENDEMIC TAXON

No

ENDEMIC GENUS

No

ENDEMIC FAMILY

No

ECOLOGY

LIFE CYCLE AND DISPERSAL

Minute spores are wind dispersed (Thorsen et al., 2009).

OTHER INFORMATION

ETYMOLOGY

banksii: Named after Sir Joseph Banks, 1st Baronet, GCB, PRS (24 February 1743 - 19 June 1820) was an English naturalist, botanist and patron of the natural sciences.

NVS CODE

BLEBLE

CHROMOSOME NUMBER

2n = 66

PREVIOUS CONSERVATION STATUSES

2017 | Not Threatened | Qualifiers: SO

2012 | Not Threatened

2009 | Not Threatened

2004 | Not Threatened
