

Crassula colligata subsp. colligata

SYNONYMS

New Zealand plants had erroneously been referred to *Crassula tetramera* (Toelken) A.Druce et Sykes. This species is endemic to the central portion of northern Australia.

FAMILY

Crassulaceae

AUTHORITY

Crassula colligata Toelken subsp. *colligata*

FLORA CATEGORY

Vascular – Native

ENDEMIC TAXON

No

ENDEMIC GENUS

No

ENDEMIC FAMILY

No

STRUCTURAL CLASS

Herbs - Dicotyledons other than Composites

NVS CODE

CRATET

CURRENT CONSERVATION STATUS

2017 | Not Threatened | Qualifiers: EF, SO

PREVIOUS CONSERVATION STATUSES

2012 | Not Threatened

2009 | Not Threatened

2004 | Not Threatened

DISTRIBUTION

Indigenous. In New Zealand known from North and South Islands but more common in the eastern South Island. Common in Australia

FLOWER COLOURS

Red/Pink

LIFE CYCLE

Minute follicles are dispersed by wind and water and possibly also by attachment (Thorsen et al., 2009).

ETYMOLOGY

crassula: From the Latin *crassus* 'thick', meaning 'rather thick'
